

JST's Chemical Workstations are designed as an exhausted work surface for laboratory applications. Even airflow is provided across the worksurface. The worksurface is liquid tight maintaining a dry storage area below the surface. This storage area is accessed through sliding doors in the front. The station features fluorescent lighting above the work area in the headcasing which is accessed by sliding doors as well as a GFI duplex outlet located in the front section.

STANDARD FEATURES

- Heavy Duty Casters
- Leg Levelers
- Fluorescent Lighting
