

Whether disposing of spent chemistry or delivering fresh; JST offers drum cabinets for solvents, acids or base solutions.

All cabinets are designed with safety in mind. Solvent cabinets are double wall construction and include CO2 Fire Suppression systems for flammable chemistries. All cabinets include sealed secondary containment with leak detection. Drum dispense heads contain venting, chemical fill and liquid level connections. Just disconnect the head and hang it on the hook to change out the drum. Optional rollers are included to make sliding the drum into position easier. Pneumatic pumps are sized for the necessary head pressure. Optional PLC controls are available to manage bulk filling to single or multiple stations.

FEATURES

- White Polypropylene, PVC-C FM4910 Material or 304 Low Carbon Stainless Steel Available.
- Sized to fit standard 30 gallon or 55 gallon drums.
- Teflon drum heads and tubes
- Storage area for temporary head storage
- Liquid Levels thru a nitrogen backpressure
- Exhausted Cabinet
- Front access doors for easy maintenance
- PLC Controls
- Optional liquid level via scales
- Optional N2 blanket for solvents
