JOB SUMMARY

Utilize engineering blueprints and specifications to create plumbing and electrical subcomponents, perform interface plumbing and wiring, final assembly and system integration.

SYSTEMS INTEGRATION TECHNICIAN

☑ General Responsibilities:

- Accurately interpret engineering drawings and perform plumbing, wiring, and assembly to meet functionality and specification requirements.
- Trouble-shoot components at start up, and maintain a low failure rate.
- Competently use measuring instruments and diagnostic devices and contribute to JST's quality program by following quality procedures.
- Maintain stewardship of equipment, and contribute to the maintenance and cleanliness of the shop and equipment.
- Perform miscellaneous tasks as required to support manufacturing, engineering, quality, and quoting departments.

☑ Job Qualifications:

- Able to read assembly blueprints as well as plumbing & electrical schematics.
- Able to perform interface plumbing and wiring of components to meet specifications.
- Perform sub-assembly of units and components including pumps, flowmeters, manifolds, etc.
- Perform point to point and interface plumbing for systems integration.
- Perform sub-assembly of boards and components including motors, pumps, drives, controllers, etc.
- Perform point to point and interface wiring for systems integration.
- Able to use process pipe welding equipment including, butt-fusion IR welder, socket welder, orbital welder, and hand and power tools as needed.
- Maintains a clean work area both inside and outside equipment.
- Technical degree preferred or equivalent experience.
