JST Introduces New Partnership with nFort Technology to Provide Expanded Sales Support in Taiwan

JST now offers local representation in Taiwan supporting sales, installation, and maintenance of JST Manufacturing Wet Benches and other semiconductor equipment.

Meridian, ID: JST Manufacturing, Inc. today announced a new partnership with nFort Technology. The partnership will combine JST's Manufacturing's diverse portfolio of innovative and customizable wet chemical processing and cleaning benches with nFort's knowledgeable support for customers in Taiwan for the semiconductor, IoT, MEMS, and optoelectronics market.

"We are excited about our partnership with nFort Technology," said Ryan Zrno, Chief Executive Officer at JST Manufacturing, "to see what the future brings not only for the partnership, but more importantly, our Taiwanese customers."

The benefits of the new partnership include:

- A local sales staff, dedicated to collaborating with JST Manufacturing to provide quality, cost-efficient, and safe solutions
- Access to trained local service technicians available for installation of JST Manufacturing equipment
- Local field service support available for existing JST Manufacturing semiconductor wet process equipment.

"We are very focused on technology and never stop learning & growing as our customer needs this" says Jeffrey Cheng, owner of nFort Technology. "Introducing foreign advanced technology to serve local companies is a good example we have been doing in the last decade."

About JST Manufacturing, Inc.: JST Manufacturing is a world class supplier of wet benches for the semiconductor, optoelectronics, biomedical, food processing, and other clean industries. We collaborate with our customers to provide best solutions for lab, fab and HVM requirements, which incorporate reduced chemical usage, reduced footprint and efficient automation for improved throughput to provide the maximum return on investment for the industries we serve.

About nFort Technology: nFort Technology has been supporting customers in semi, optoelectronics, biomedical since 2007. We are close to all customers, to TSMC, the worldwide largest IC foundry, only takes 15 minutes by car. To serve local companies is a good example we have been doing in the last decade, covering from Dry process (Etch, CVD, Sputter, IBAD...) to Wet process (Clean, Etching...).
